

QuestRealm: User Guide

1. Mobile Application

The mobile app serves as the primary interface for managing your character, tracking your progression, and navigating the AR world.

1.1 Account & Character Setup

- **Onboarding:** Upon launching, you will be greeted by the QuestRealm portal. From here, you can *Login* with an existing account or *Register* a new one. Password recovery is available via the "Forgot password?" link.
- **Character Creation:** New wanderers must select the role and a gender (Male/Female), then they must claim an available username.

1.2 The Overworld Map

The core gameplay takes place on an interactive, location-based map. The interface displays a top-down, animated fantasy representation of your real-world surroundings.

- **Exploration:** As you physically move in the real world, your avatar traverses the in- game map.
- **Points of Interest:** Look out for **Obelisks** scattered throughout the realm. Approaching these structures allows you to interact with them to collect valuable resources and progress quests.
- **HUD Elements:** The main screen features your character's portrait and level in the bottom left, alongside quick-access action buttons and a notification bell in the top right.

1.3 Profile & Progression

Accessing the Profile tab allows you to monitor your character's growth and identity.

- **Stats & Role:** View your chosen class, your current Level and a detailed experience bar tracking your progress to the next level.

1.4 Social Features & Guilds

QuestRealm is a collaborative experience. The app provides robust social tools to keep you connected with fellow adventurers.

- **Friends List:** View your companions' statuses (Online, Offline, Busy) and recent activities (e.g., "Has completed a raid" or "Discovered a new Obelisk"). You can accept incoming friend requests directly from the Notifications center.
- **Guilds:** Join or manage a Guild. The interface displays your Guild's banner, name, current level, and the members. You can see the hierarchy (Leader, Officer, Member) and track your guildmates' recent accomplishments.

1.5 Quest Management

The Quests log is divided into different categories to guide your journey:

- **Daily Quests:** Short, repeatable tasks such as "Interact with an Obelisk." Completing these yields immediate rewards like Gold and Experience.
- **Main Quests:** Epic narrative arcs, such as "Defeat the Lich King," which require you to travel to specific strongholds and engage in major encounters for substantial payouts.

1.6 Application Settings

Customize your experience in the Settings menu:

- **Audio:** Adjust Master Volume and Music Volume independently.
- **Graphics:** Toggle Vsync and adjust visual Quality (Low / High) to optimize battery life or visual fidelity.
- **Notifications:** Enable or disable physical Vibrations, All Push Notifications.

2. Smartwatch Application

The smartwatch application is designed for heads-up, on-the-go gameplay, allowing you to interact with QuestRealm without pulling out your phone.

2.1 Navigation & Tracking

The primary smartwatch screen acts as an immersive navigational tool. It features a directional compass pointing you toward your currently tracked objective. It dynamically displays the remaining real-world distance and the current local time.

2.2 Quick Notifications & Actions

Stay informed and ready for battle directly from your wrist.

- **Raid Alerts:** When a nearby friend or guildmate initiates a raid, an alert will be pushed to your watch (e.g., "Mih4i has invited you to join his raid.").
- **Instant Response:** You can quickly tap **Accept** or **Reject** right from the watch face to seamlessly drop into multiplayer encounters.

3. AR Glasses Interface

For the ultimate experience, QuestRealm is integrated with Augmented Reality (AR) glasses to project the fantasy realm directly over the real world.

3.1 World Overlay

- **Heads-Up Identifiers:** When looking at physical locations (like a shopping center or park), the AR glasses show digital landmarks. For example, looking at a real-world location will render a virtual **Obelisk** anchored to that exact GPS coordinate, labeled with its real-world counterpart.
- **Player Tracking:** The AR interface identifies nearby players in your field of view, displaying their Avatar, Username, Level, and Class, allowing for organic, real-world socialization and strategy

3.2 Immersive Combat

- **AR Raids:** Join forces and fight together with other players in real-time raid events directly through your AR interface.
- **Virtual Monsters:** The AR glasses project the raid bosses and monsters directly into your physical environment. You can visually engage, track, and battle these creatures alongside your allies right in your real-world surroundings.
